

Enterprise Network Edge

Providing secure, uncompromising performance as your network needs evolve

Enterprise Network Edge gives large-scale multi-site organizations the ability to transition to a hybrid network architecture built around advanced SD-WAN technologies. Powered by Fortinet, Enterprise Network Edge offers access to multiple cloud instances and advanced security features with throughput speeds up to 100 Gbps, while also supporting distributed workforces. It delivers a better digital experience for your teams and creates a flexible network that can quickly meet the evolving needs of your organization.

Powerful, adaptable and fully supported: Enterprise Network Edge enhances the digital experience

Enterprise Network Edge also supports single-site organizations that require high-capacity throughput speeds and low latency while providing security mitigation. Spectrum Business® for enterprise provides a consultative approach from design through implementation to ensure a smooth network transition. Available services which can be virtually provisioned include WiFi, switching and virtual edge.

Enterprise Network Edge creates an SD-WAN environment with security protections throughout your network

Product highlights

- **Scalable performance:** Seamlessly and automatically connect multiple locations when you adopt an SD-WAN solution with low latency, intelligent routing for critical applications and scalability for thousands of locations.
- **Designed for the cloud:** Connect to multiple cloud service providers simultaneously to create a seamless user experience with security features.
- **Enhanced security:** Incorporate firewalls and unified threat management (UTM) with provider-managed, integrated security from the edge to the cloud.
- **Remote work ready:** Enable remote workers to securely connect to your network with support for up to 50,000 people and no additional licenses to buy. Implement enhanced security access to your network from any device, at any time, in any location while protecting your organization.
- **Flexible management:** Choose the level of management you desire, allowing your team to control what they want and consult with us for the rest.
- **Comprehensive control:** Gain visibility into performance, routing, SD-WAN configuration, firewall settings and other network components across locations with a centralized portal.
- **Multiple connectivity options:** Choose the connectivity option that meets your specific needs.
- **Minimize expenses:** Create a more secure, cost-effective SD-WAN solution with no infrastructure to purchase, no hardware to maintain and no vendor lock-in — all for one monthly cost.
- **Several deployment options:** Select the network architecture that best fits your needs — a public/private structure or transition to a fully public network over time.

Key benefits

- Support employee productivity across multiple locations and cloud connections for an exceptional digital experience.
- Give employees across your organization consistent, high-performing access to the cloud applications that streamline workflows.
- Strengthen the security of your network with automatic updates.
- Achieve throughput speeds up to 100 Gbps.
- Extend your network resources to team members at home or on the road to facilitate collaboration and communication no matter their location.
- Minimize time spent on network administration by giving your team a range of options — from co-managed to a fully managed solution.
- Offer visibility into network usage and performance of your network for faster and better decision making.
- Expand your connection options with choices such as Dedicated Fiber Internet, Secure Dedicated Fiber Internet, Enterprise Internet, Wireless Internet or Ethernet Services, or bring your own internet, Ethernet or MPLS.
- Lower costs and create efficiencies compared to MPLS and other private networks.
- Modernize your network while continuing to meet the needs of your organization.

Available services

- **Dedicated Fiber Internet:** Achieve dedicated internet connectivity with symmetrical upload and download speeds, bandwidth up to 100 Gbps and backed by a service-level agreement (SLA) that includes 100% uptime all the way to the hand-off point at your location.
- **Enterprise Internet:** Gain fast, reliable and cost-effective access to the internet or cloud-based applications with an enterprise-grade experience. Available in a range of speeds up to 1 Gbps, the solution provides peace of mind with an SLA that includes 99.9% uptime and a rapid restoration commitment all the way to the hand-off point at your location.
- **Secure Dedicated Fiber Internet:** Connect with confidence when you integrate fast, dependable, dedicated fiber internet service with enterprise-level cybersecurity protection in one, affordable and remarkably simple solution. The service is backed by a 100% uptime SLA all the way to the hand-off point at your location.
- **Wireless Internet:** Connect to the internet via a wireless solution that helps keep your business running with temporary or secondary internet access over 4G or 5G LTE Advanced technology. This all-inclusive wireless internet service comprises equipment, installation and support.
- **Advanced security:** We work with leading providers like Cisco and Fortinet to protect your network with advanced security capabilities across all your locations. Our security services include firewalls, unified threat management (UTM), URL content filtering, advanced malware and intrusion protection backed by 24/7/365 monitoring, automatic updates and industry-leading service-level agreements.
- **WiFi:** Connect employees and visitors to WiFi that provides speed, reliability and performance with security that begins at the wireless access point.
- **Switching:** Prioritize traffic on the data link and network layers (layers two and three) with cloud-managed, enterprise-grade switching.
- **Virtual edge:** Provide seamless, enhanced security access to your cloud-based, business-critical applications with key cloud service providers.
